SUMMARY

Unreal Engine 5 Gameplay Programmer specializing in core player mechanics, combat systems, and scalable gameplay architecture using C++ and Blueprints. Experienced with Unreal Gameplay Framework, replicated gameplay, and performance-optimized implementation of player mechanics, UI, and VFX.

SKILLS

Languages: C++, Python

Game Engine: Unreal Engine 5 (C++ & Blueprints)

Gameplay Programming: Unreal Gameplay Framework, Component-Based Architecture, Event-Driven Architecture, Animation Blueprints, Niagara VFX, UMG UI Systems

Multiplayer & Networking: Replication & RPCs, Server-Authoritative Gameplay, Dedicated Servers, AWS GameLift, Network Debugging

Tools: Visual Studio, Git, Unreal Insights, Meta Quest

EXPERIENCE

ELDC (E-learning Design Center)

Kolkata

Unreal Developer Intern

April 2026 - Present

- Developed immersive VR learning, training, and assessment simulations in Unreal Engine 5 using Blueprints within the company's existing gameplay framework, architecture, and production pipeline.
- Implemented VR interaction systems and assessment workflows using component-based gameplay architecture and Blueprint scripting, extending existing gameplay modules while maintaining internal development standards.
- Collaborated with designers, 3D artists, animators, and technical teams to integrate optimized assets, animations, and interactions into production-ready VR experiences.
- Tested VR simulations on Meta Quest hardware, debugging interaction systems, controller workflows, and performance issues to ensure stable real-time experiences.

Gbit Studios

Warangal

Game Developer Intern

March 2022 - December 2022

- Collaborated with programmers and artists to implement gameplay systems and level logic, ensuring features aligned with technical constraints and performance targets.
- Assisted in implementing and debugging gameplay mechanics during development, identifying and resolving issues affecting gameplay behavior and stability.
- Worked with artists to optimize assets (poly count, texture sizes, LODs), reducing draw calls and improving in-engine performance on target PC hardware.
- Conducted gameplay testing, analyzed player feedback, and iterated on mechanics and level flow.

UNREAL ENGINE PROJECTS

Multiplayer FPS Prototype (Client-Server Architecture) | C++, AWS GameLift, Dedicated Servers [\[link\]](#)

- Built a server-authoritative multiplayer FPS prototype using the Unreal Gameplay Framework with replicated Actors, RPC communication, and network authority handling.
- Implemented and debugged replicated player mechanics (shooting, grenades, hit detection, health states) using C++ and Blueprints, ensuring consistent behavior across clients.
- Integrated HUD elements and feedback (crosshair, hit markers, ammo UI) to support responsive combat.
- Deployed dedicated servers on AWS GameLift, enabling scalable cloud-hosted multiplayer sessions.
- Leveraged GameMode/GameState/GameInstance/PlayerState for session management and replicated player states.

Modular Melee Combat System | *Unreal Blueprints, Behavior Trees, Niagara VFX System* [\[link\]](#)

- Developed a production-ready modular combat framework designed for reuse across multiple gameplay systems, supporting combo chains, parry, block, stamina systems, and extensible ability logic.
- Created reusable DamageComponent and DamageInterface for clean, maintainable damage logic across Actors.
- Implemented performance-optimized Health and Stamina systems with regeneration states and event-driven logic.
- Refined AI enemies with custom Behavior Trees, state-driven logic, and EQS-powered perception/movement.

Death Stranding-Inspired Terrain Scanning System | *C++, Unreal Blueprints, Post-process material* [\[link\]](#)

- Designed a modular terrain scanning VFX and tactical visor mode using custom post-process materials and interface-driven architecture for enhanced gameplay.
- Integrated dynamic object highlighting via custom stencil bitmasking and Fresnel-based effects for real-time feedback.
- Built flexible, extensible scanning systems and context-sensitive UI widgets for scalable gameplay features.

EDUCATION

National Institute of Technology Warangal

2021-2025

B.Tech in Electrical and Electronics Engineering
